Increase water filter changes by **+25%** with IoT surveillance

Avoid overrun filters, eliminate scale and increase customer satisfaction

flowplan

// Flowplan ensures we always know the consumption on all our installations. Our customers love that their machines are secure and we have increased revenue by 25%. //

Never miss a filter change

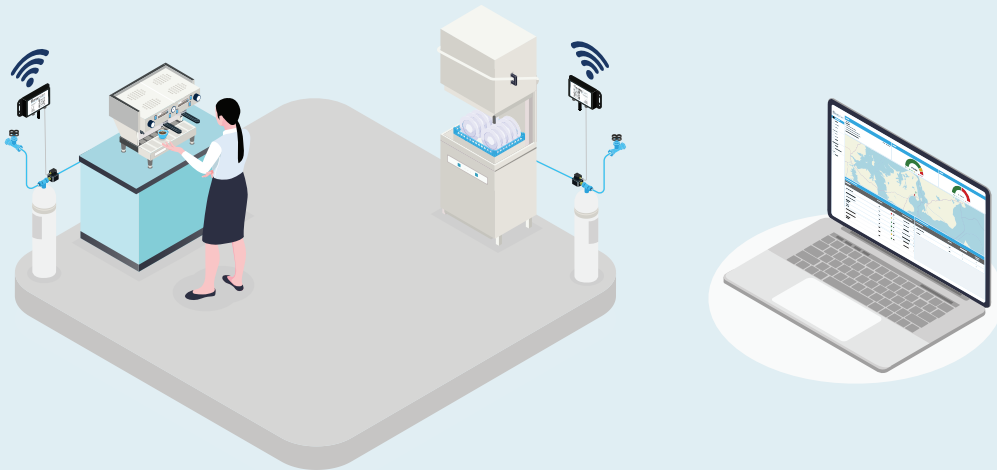

By monitoring the consumption you ensure that no filters overrun and that no machines are exposed to scale. It's a win-win for you and your customers.

Do more tasks in the same time

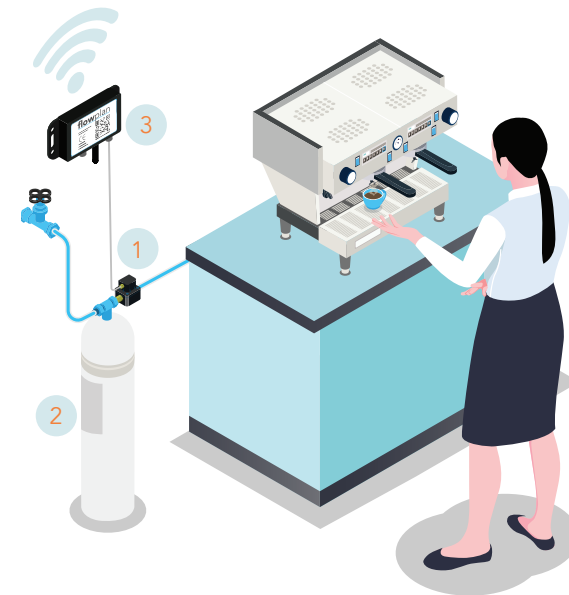

Our intuitive system predicts the exact dates for each filter change. This enables you to plan ahead and do more changes while in the area. Flowplan even plans work orders and optimized route planning.

It works on everything

Our solution works on all types of filters and machines. The only requirement is a waterflow. The solution calculates filter capacities based on hardness from all major filter providers.

Plug-n-play installation

Our **Flowmeter (1)** is installed on your existing water filter **(2)**, and connected to the Flowplan **Beam (3)**. The Beam automatically connects to the network and everything else is then handled by the system. All data is transmitted via the Beam's own cellular network, onto our **Backoffice** system where it's processed and analyzed. Flowplan automatically predicts and plans the next filter change, maintenance visit and even gives insights to coffee brew times, coffee counters and bean consumption.

Flowplan works on all water consuming devices, no matter type or age.
