

the smart kitchen timer

What the cluck?

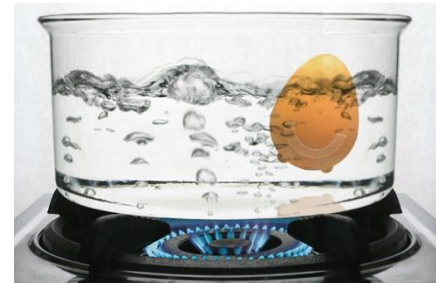

cluck helps home cooks make their favorite foods more conveniently, consistently and safely by connecting them with their kitchens...and with their food.

cluck is a small, immersible, food-safe temperature sensor and timer for the kitchen.

The **cluck** sensor and smartphone app provide important alerts and information about the foods being prepared (e.g. time to boil, time to done) while cooking.

Using cluck is easy.

Drop it in a pot, start the heat, set the app and then go do something else. The app tells you when to come back!

cluck can help home cooks consistently prepare a growing number of food staples...

- Boiled Eggs - 2016
- Noodles: Pasta, Ramen, Ravioli - 2016
- Coffee (water temp for perfect pour overs) - 2016
- Tea (steep times for perfect tea) - 2016
- Potatoes - 2016
- Sous Vide cooking (with accessory) – 2016/2017
- Steamed vegetables - 2017
- Boiled Lobster/Crab - 2017
- Rice - 2017
- Baby Formula - 2017

cluck is uniquely positioned for an easy, low-cost entry into the smart kitchen with cookware (e.g. pots, slow-cookers, kettles) consumers already own.

By keeping home cooks connected to the kitchen, **cluck** provides peace of mind and convenience when stepping away from an active kitchen.
