CRYO North America  
401 Louisiana Street, 8th Floor  
Houston, TX 77002-1629

Dear Amir Amirsadeghi,

This letter is to notify that the Cryo Science equipment named CryoArctic (Arctic) has been reviewed by Air Products and has completed the Air Product's HAZOP review for the U.S market. The Air Product's HAZOP review is an internal Hazard and Operability Review, which is a structured and systematic review of a complex system to identify and evaluate problems that may represent risks to personnel or equipment.

Air Products owns and safely operates more than 300 production facilities and have more than 5,000 cryogenic liquid storage and delivery systems in the United States.

**The CryoArctic is cleared for Air Products to provide Liquid Nitrogen supply to the unit(s) for deployment in the United States.**

We would like to recognize the hard work by Cryo Science as they have incorporated our feedback and improvement recommendations into your equipment. This letter may be shared with inspectors and other agencies as needed but is not to be used for the promotion of sale or to companies intending to purchase CryoArctic units. We look forward to working with you to provide a safe and reliable supply of nitrogen to your units and to the owners and operators of the equipment.

Regards,  
JP

J.P. Gunn
